

Bug Report: Course List Not Filtering by Selected Academic Year

KUET Kinship — Course Selection Module

Overview

Bug ID: KUET-KINSHIP-001. Build: kuet_kinship_beta_build_101.apk. Module: Course Selection. Severity: Medium. Priority: High. Reproducibility: always reproducible. Status: open, found during monitoring and testing.

Summary

The Course Selection module currently shows the same course list regardless of which academic year the user selects. Selecting 1st Year, 2nd Year, 3rd Year, or 4th Year does not appear to change the displayed course data.

Objective of the Test

The purpose of this test was to verify whether the Course Selection feature correctly filters or loads courses according to the academic year chosen by the user.

Steps to Reproduce

1. Open the KUET Kinship application.
2. Navigate to the Course Selection section.
3. Select 1st Year and note the displayed course list.
4. Return to the year-selection screen.
5. Select 2nd Year and compare the course list.
6. Repeat the same process for 3rd Year and 4th Year.
7. Compare the results across all four selections.

Actual Result

The same course list is displayed after selecting different academic years. In other words, the selected year does not appear to affect the course list being shown.

Expected Result

The course list should change according to the selected academic year, with each year showing only the courses that belong to it: 1st Year should show relevant 1st Year courses, 2nd Year should show relevant 2nd Year courses, and the same for 3rd and 4th Year.

Observed Behavior

When 1st Year is selected, a course list is displayed. When 2nd Year, 3rd Year, or 4th Year is selected afterward, the same course list appears each time rather than an updated one.

Impact

- Users may receive incorrect academic information for their selected year.
- Students may assume that the displayed courses belong to the selected year.
- The issue reduces the reliability of the Course Selection feature.
- If left unresolved, users may make incorrect decisions based on unrelated course information.

Severity and Priority

Severity is rated Medium because the application remains usable, but a core feature is providing potentially incorrect information. Priority is rated High because course filtering is a core part of the academic flow, so the issue should be fixed before the feature is considered stable.

Possible Technical Cause

A possible cause is that the selected year is not being passed correctly to the course-list logic, or that the course list is being loaded from a fixed or static dataset without applying a year-based filter. This is a debugging hypothesis, not a confirmed root cause, and the exact cause should be verified in the implementation.

Suggested Investigation and Fix

- Verify that the selected academic year is captured correctly from the Year Selection screen.
- Verify that the selected year is passed correctly to the Course Selection screen or module.
- Check whether each course record has the correct year or category metadata.
- Verify that the course list applies a filter based on the selected year.
- Ensure that changing the year refreshes the course list instead of reusing stale data.
- Test all four years after the fix and compare the displayed results.

Validation and Regression Test

After the fix, repeat the same test for all four years, then switch between years multiple times to make sure the list updates correctly and no previous year's data remains visible. Selecting each year should show only the courses relevant to that year, and switching between years repeatedly should update the course list correctly every time.

Acceptance Criteria

- The selected academic year must determine which courses are displayed.
- No course from another year should appear unless it is intentionally shared across years.
- Changing the selected year must update the course list correctly.
- The behavior must remain correct after navigating back and forth between screens.
- The fix must not break the existing course-selection flow.

Evidence

A screenshot or short screen recording should be attached showing the course list after selecting different academic years. Ideally, the evidence should clearly show the selected year and the resulting course list so contributors can compare the behavior.

Environment

Application: KUET Kinship. Build: kuet_kinship_beta_build_101.apk. Platform: Android. Test type: functional and monitoring test. Feature: Course Selection. Issue type: incorrect filtering or data selection.

Current Status

The issue is open and was identified during active monitoring. It has been documented for tracking and contributor visibility. Once the implementation is corrected, the validation steps above should be repeated and the report can be updated with the fix and verification result.

Final Note

This report is intended to provide a clear, reproducible record of the issue so that active contributors can quickly understand the problem, verify it independently, implement a fix, and confirm that the corrected behavior works across all academic years.
