

KUET_Titanium's Understanding

Campus Knowledge Continuity System • KUET CSE Department

A Story from the KUET CSE Campus

It's a regular Sunday morning at the KUET CSE department. **Tahmid** is rushing down the corridor holding an unorganized stack of clearance forms, completely confused about which room to submit them to or who needs to sign them first. At the same time, **Mira** is hunting for a specific hardware module for her project that isn't available in the central store, while **Tahsin** is frantically asking around for previous semester question papers that seem to have disappeared online.

Just as frustration sets in, a familiar senior walks past, smiles, and clears up the entire mess in under two minutes:

-  **Tahmid:** "Take that to Room 302, but make sure the Assistant Registrar signs it before 11 AM."
-  **Mira:** "Check the bottom-back drawer in CSE Lab 2; the previous batch left extra components there."
-  **Tahsin:** "Stop digging through dead Google Drive links—just ask the library assistant on the 2nd floor for the archived folder."

Just like that, confusion turns into absolute clarity. Every campus has those go-to seniors who essentially hold the unofficial "user manual" to university life in their heads.

The Dilemma: But then comes graduation day. The seniors toss their caps, leave campus, and take years of hard-earned shortcuts, procedural tricks, and practical wisdom right out the gate. The very next term, the new batch is forced to start back at square one, repeating the same struggles all over again.

Breakdown of the Core Problem

What is the actual problem?

It's a classic case of **institutional amnesia**. Crucial operational knowledge on a campus rarely lives on official websites or handbooks—it lives inside people's heads. Without a structured way to pass this wisdom down, valuable campus hacks and practical guidelines vanish with every graduation cycle.

Who experiences it?

Students (Especially Freshers & Juniors)

They waste endless hours, energy, and sanity navigating basic campus bureaucracy, finding obscure resources, or figuring out how things actually work.

Faculty & Staff

They end up answering the same repetitive procedural questions dozens of times every single semester because students have nowhere else to check.

Why does it matter?

- **Wasted Energy:** Students spend critical time solving administrative riddles instead of building projects, studying, and innovating.
- **The "Inefficiency Tax":** Every new generation pays the price of making the same avoidable mistakes simply because past learnings were never preserved.
- **Misinformation Trap:** When advice is passed down informally through random chat groups, it quickly becomes outdated, inaccurate, or completely misleading.

Our Proposed Solution

To permanently end this cycle of lost knowledge, **KUET_Titanium** is building an offline-first Android application powered by an embedded **SQLite** database. It serves as a permanent, searchable campus repository that works anytime, anywhere—even without internet connectivity.

- 📱 **Offline Knowledge Hub:** Built using SQLite to locally store verified campus advice, lab locations, course suggestions, notes, question paper links, and submission instructions for CSE students.
- 🔍 **Search & Roadmap Guidance:** Features a fast search bar for instant lookups and step-by-step guided roadmaps for complex administrative processes.
- ⌚ **Offline Lifespan Validation:** Automatically tags knowledge with lifespan/validity timers to ensure students know whether information is fresh or needs re-verification.
- 🏆 **Gamified Peer Contributions:** Implements user levels, contribution scores, and a leaderboard system to reward students who contribute and update useful campus insights.
